Allowable Subject Matter

The following is an examiner's statement of reasons for allowance: Claims 19-23 and 26-31 are allowed over the closest reference, Crockatt *et al.* (U.S. 4,681,910).

The present invention is drawn to a composition provided in the form of an aqueous emulsion comprising: (a) from 5% to 60% by weight of at least one paraffin wax a paraffin wax of petroleum or synthetic origin including, as a mixture, saturated and unsaturated aliphatic hydrocarbons of formula C_nH_{2n+2} and C_nH_{2n} for which n is at least equal to 30 and for which the melting point is between 40 °C and 75 °C, (b) from 8% to 40% by weight of at least one hydrocarbon compound which is a linear or cyclic hydrocarbon oil of aliphatic or naphthenic origin, alone or as a mixture, of formula C_nH_{2n+2} and C_nH_{2n} for which n is less than 30, (c) from 10% to 50% by weight of at least one ester-containing oil formed of at least one ester resulting from the condensation reaction of a saturated or unsaturated fatty acid with a mono-, di-, or trihydric alcohol, (d) from 15% to 35% by weight of solids content of at least one latex formed of a colloidal aqueous emulsion of at least one polymer, (e) from 0.02% to 5% by weight of at least one pulverulent filler or inorganic or organic origin, and (f) water in a quantity sufficient for 100%.

Crockatt *et al.* discloses a coating composition comprising an aqueous dispersion of petroleum wax, polyethylene wax, surfactant, and an aqueous latex of emulsion copolymerized monoethylenically unsaturated monomers. Paraffin waxes contain C_{18} to C_{32} hydrocarbons having melting point in the range about 50-70 °C. Non-ionic surfactant is utilized as emulsion stabilizer, and it is an ethoxylated castor oil. The latex is preferably an acrylic copolymer emulsion. Silica, alone or in admixture with platy clay, is included as pigment. Compositions of Crockatt *et al.* contain 5-50 wt % of the wax dispersion, 5-95 wt % of polymer emulsion. Working examples show that commercially available acrylic emulsion having a solids content of about 46 % and a wax dispersion having a solids content of about 39 % are suitable for practicing the invention of the prior art. Total concentration of non-volatile solid materials in the final composition is from about 5 to about 40 percent. The amount of ester based non-ionic

surfactant is that sufficient to ensure formation of a stabilized emulsion; this quantity is at least 5 wt %, and preferably at least 20 wt %.

Crockatt *et al.* is silent with respect to the density of the paraffin wax, and there is no teaching or suggestion to use paraffin wax containing specifically from 5% to 60% by weight of paraffin wax containing aliphatic hydrocarbons of formula C_nH_{2n+2} and C_nH_{2n} for which n is at least equal to 30 and for which the melting point is between 40 °C and 75 °C and from 8% to 40% by weight of hydrocarbons of formula C_nH_{2n+2} and C_nH_{2n} for which n is less than 30. The prior art also does not teach or render obvious a composition having components in requisite amounts set forth in instant claims. Therefore, it is deemed that the composition of instant claims is patentably distinct over the invention of Crockatt *et al.*

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
